

Step By step to install MegaRAID driver on CG2300

1. Download this file from Kontron web site:

MR_Linux_drv_v6.810.10.00.tgz

2. Extract it and you will have:

MR_Linux_drv_v6.810.10.00.tar

3. Extract it again and you will have the following folder:

MR_Linux_drv_v6.810.10.00

4. Once in it, select the OS folder that you want the Driver for.

In this case we want centos 7.2 so we select the following: rhel7_oel7_centos7

5. Select and copy the rpms -l folder in the tmp folder of your system

6. Go in: /tmp/rpms -l folder.

7. Then run the following command:

```
rpm -ivh kmod-megaraide_sas-06.810.10.00_el7.2-1.x86_64.rpm
```

8. Wait until you see the command line comes back to the root.

9. The installation is now done.

For any further help or information please refers to the instruction provide by MegaRAID that is also on Kontron website.
